

TRUZir Teeth

A TRUZIR DENTAL IMPLANT

An artificial tooth root made of Titanium or Zirconia. It is placed in the jawbone and used to support a dental crown, dental bridge or a denture. Implants provide a long-lasting, durable solution for missing teeth. In fact, if properly cared for, implants can last a lifetime. They look, feel, and function just like your natural teeth.

A TRUZIR IMPLANT

Can be used to replace a single tooth, or two implants can be placed to create a bridge without impacting surrounding teeth. Many people with implants can't tell the difference between their natural teeth and their implants, and neither can their friends and family!

AT SEVEN HILLS SOLUTIONS

We stand behind our work. Our many years of advanced training and experience in placing dental implants will give you the confidence and assurance that you are in good, capable hands.

SEVEN HILLS SOLUTIONS

Uses the latest advanced procedures and leading-edge technology to carefully plan and perform your dental implant placement.
