## *HOLISTIC DENTAL IMPLANTS APPROACH*

Holistic Dentists provides patients with many tooth replacement options that help restore tooth function while also improving the look of your smile.

At Seven Hills Solutions, we recognize that while dental implants are an excellent long-term solution to replacing tooth loss there are some issues that need to be considered first in the context of your general health.

There are three major considerations you should consult your dentist about when investigating dental implants:

### ***ARE YOU ALLERGIC OR HYPERSENSITIVE TO THE METAL USED?***

What is your general health status? If you have a compromised immune system, the longevity of the implant can be affected. At Seven Hills Solutions, we conduct a thorough medical assessment to assess if you are suitable for dental implants.

Why were the teeth lost in the first place? If you lost the tooth or teeth due to tooth infections, the dental implant may not last. You should always address the original problem first.

Holistic Dentistry looks at dental health in the context of one's overall health. It is concerned with the person attached to the tooth, not just the tooth itself.

## *HOLISTIC DENTISTRY ENCOMPASSES A WIDE RANGE OF HEALTH ISSUES.*

All parts of the human body are connected and no part works in isolation to another. A holistic dental approach looks at several things in relation to one's oral health.

Firstly, the mouth is the gateway to the respiratory tract. If you think breathing is important and if you think sleeping is important, then the shape and health of the oral cavity is critically important to your general health.

Secondly, the mouth is the beginning of the digestive tract. Therefore, having a functioning masticatory system (the ability to chew) is an important first step in digesting your food. Food is important to our health too.

Thirdly, the mouth is the site of the two most common infections known to man woman or child – gum disease and tooth decay. Tooth decay means we must treat the affected teeth and restore teeth. As a profession, we implant more materials than all other health professions put together. Therefore, the materials we implant need to be compatible with good health.

We also look at sleep, chronic head and neck pain and much more.

If you would like to ask our team about dental implants – please contact us now or send us an inquiry.

The fact that this material is biocompatible means that it is safe to stay within your mouth for a long time. There is no need to worry about any adverse reactions from your body because it is not rejected by the human body.
